ABOUT ME

A detail-oriented software developer with 4+ years of experience in designing and developing scalable applications using DotNet. Passionate about writing clean, efficient code and solving complex problems. Experienced in working with Entity Framework, LINQ, and Dapper. Always eager to learn new technologies and enhance my technical skills.

SKILL

Programming Languages: C#, Golang, JavaScript
Frameworks & Technologies: .NET Core, ASP.NET MVC, WPF, REST APIs
Databases: MS SQL Server
ORM & Data Access: Entity Framework, Dapper, LINQ, ADO.NET
Messaging & Scheduling: RabbitMQ, Cron Jobs
Concepts: Multithreading, Parallel Processing, OOP, API Design
Tools & Version Control: Git, Azure

WORK EXPERIENCE

Software Engineer – Psibertech Solutions Pvt Ltd 2022–PRESENT

Task Scheduler Automation System

- Designed and developed an automated task scheduling system to execute daily background operations such as database queries, API calls, and email notifications.
- Implemented Cron-based job scheduling to manage recurring and time-triggered background tasks efficiently.
- Integrated RabbitMQ for asynchronous message queuing and reliable task distribution.
- Enabled parallel job execution using concurrent processing techniques to improve throughput and system performance.
- Built a configurable scheduling engine using .NET Core 9 to support scalable and event-driven task execution.
- Developed REST APIs for task configuration, monitoring, and execution tracking.
- Optimized database interactions using Entity Framework and Dapper for high-performance task processing.
- Implemented centralized logging and robust error-handling mechanisms to ensure system reliability and easier debugging.
- Reduced manual operational effort and improved process efficiency through automation.

Technologies: .NET Core 9, C#, MS SQL Server, Entity Framework, Dapper, RabbitMQ, Cron Jobs, REST APIs

E-Commerce Reward Points System

- Developed and integrated a customer reward points system within an e-commerce platform based on purchase activity.
- Designed business logic to calculate, assign, and redeem reward points during order processing.
- Implemented RESTful APIs to manage points transactions and customer reward history.
- Ensured accurate synchronization between order data and reward balances using optimized SQL queries.
- Collaborated with cross-functional teams to deploy features with minimal impact on existing workflows.
- Improved customer engagement and retention through gamified reward mechanisms.

Technologies: .NET Core 2.2, C#, MS SQL Server, Entity Framework, REST APIs

Software Developer Trainee – App Angadi Micro-Finance project

2021-2022

- Assisted in developing a C# WPF desktop application for customer onboarding and verification.
- Implemented a customer verification module to capture Aadhaar/PAN details and integrated camera functionality for photo capture.
- Developed UI and backend logic with SQL optimization to improve application performance.
- Collaborated with the team to debug issues and enhance system stability.

Technologies: C#, WPF, MS SQL Server

Projects :

Drive Sync Backup Utility

- Developed a C# backup automation utility to synchronize files between a Google Drive local sync folder and a local storage directory.
- Implemented incremental file synchronization by detecting modified files and updating only changed content.
- Designed recursive directory traversal for efficient folder-to-folder backup processing.
- Added automated ZIP compression to archive backup data and manage storage efficiently.
- Integrated MS SQL Server logging to track backup history, file counts, and storage size.
- Implemented network connectivity checks and date-based validation to control backup execution.
- Built file size calculation and metadata tracking for monitoring backup performance.

Technologies: C#, .NET, MS SQL Server, File I/O, ZIP Compression

Library Management System

- Architected a role-based Library Management System with admin and member authentication.
- Designed object models and database schema for books, users, and issue transactions.
- Implemented CRUD operations and search functionality using C#, WPF, and MS SQL Server.
- Developed business logic validations including availability checks, issue limits, and overdue tracking.
- Ensured secure login workflows and consistent data management.

Technologies: C#, WPF, MS SQL Server

Game Development Projects

- Developed small desktop and web-based games (Magical Number, Tic-Tac-Toe, MasterMind) to practice event-driven programming and frontend logic.
- Implemented interactive UI components and game logic using WPF and JavaScript.

Technologies: C#, WPF, JavaScript, HTML, CSS

EDUCATION

2017 - 2020

JAMAL MOHAMED COLLEGE - TRICHY

Bachelor of Computer Applications(BCA)
